The market at the Morning Board was quite active but the general tendency is still downward. Stocks were pressed on the market to an extent exceeding the demand and the bears continued to offer the leading stocks down on their options. The principal support of the market are the purchases to supply shorts. but in some descriptions which have been largely depressed there is some buying for investment by out-siders. Between the Boards the market was heavy, and at the Second Board the same feeling prevailed The large shipment of specie, \$2,000,000, by the Atlantic and Vanderbilt under slightly increased demand for money had an unfavorable influence upon the spec-ulative market. A report was received from Mr. Maynard, of the Committee appointed to procure subscriptions to the proposed new issue of \$400,000 of bonds. The whole amount actually subscribed was \$178,000, though he stated that the stockholders generally, expressed themselves favorably, and many would doubtless subscribe before the expiration of the limited time. A resolution was adopted in favor of the following proposition, to be carried into effect in case of

the failure to negotiate the bonds which it proposes to issue:

"A new company to be organized, to be composed only of those stockholders who have paid in full for their stock, with a capital of \$250,000, each stockholder to be allowed the same proportion of the whole stock in the new company, that he now holds in the present company on paying its par value in cash. The commercial editor of The A having made an extensive tour in connection with the recent great railroad celebration, reports as follows respecting the crops: MONTREAL, June 18,

respecting the crops:

Montreal, June 18.

The state of the crops is the chief topic of interest, in a commercial point of view, at this season of the year, and we propose to give a condensed summary of the information on this subject gleaned in the course of a recent extensive tour.

In the Northern and Eastern States the prospects were fair, but we heard of nothing worthy of special remark, except that wheat is being again successfully calitivated in many places that were considered run out for that crop twenty or more years ago. In Maryland and Virginia farmers complain loudly of an almost total failure of the Winter wheat on account of severe frosts. Much of the land sown in this crop had to be plowed ever again, and it seems the soil and climate are not favorable for Spring Wheat; a scarcity of wheat is therefore, we believe, certain in that extensive region; the corn and other crops, though very backward, were, however, considered likely to turn out well. In the southern parts of Ohio, Indiana and Illinois the crops were promising, though very much later than usual. Indeed the Winter wheat was little or no further advanced than in Canada, and corn was only a few inches high at the same date that in some former years it had been in silk. No one, however, was alarmed at this state of things, as it was pepularly said the crops never suffered from a late Spring. In the prairies of Illinois the entire absence of shelter prevents the growth of Winter wheat, but everything appeared to be favorable for Spring wheat and corn, and the Chicago papers were loud in their joyful predictions or a good crop generally. The reports from Iowa and Wisconsin, which we did not visit were also good. in Michigan and Western Canada, which are very similar, the crops generally look remarkably well, though, singulariy enough, everything is from a week to ten days later this season alout Toronto than in the similar, the crops generally look temarkably well, though singularly enough, everything is from a week to ten days later this senson about Toronto than in the veinity of Montreal. In lower Canada we were very much pleased to see a vigor of vegetation of grass, grain and trees, unsurpassed by any region through which we had passed; and we have little doubt that the valley of the St. Lawrence will, at no distant date, be again as celebrated as ever for the growth of wheat.

We base no predictions on the facts thus presented, We base no predictions on the facts thus presented, although Western papers freely predicate upon them a gradual fall of prices till Harves., which will commence, it is said, in Kentucky and Tennessee in a week or two. This decline is the more confidently anticipated, inasmuch as the quantity of last year's crop coming in greatly exceeds expectation. The expertation of wheat and corn from Chicago, in May, 1857, was much greater than in May, 1856, and corn, especially, is continuing to come in freely. Against this, however, is to be set the fact, that the Michigan and Ohio millers had to resort to Chicago for and Ohio millers had to resort to Chicago for wheat to keep them going, a very unusual state of things caused in Ohio by the partial failure of two year scrops in succession, owing to the prevalence of

It may be remarked, us one obvious result of the very protracted seed time this Spring, that there will probably be a much greatev breadth sown and planted than in an ordinary season; and the long con-tinued cool, showery weather, has been favorable for the pastures and hay crop, and consequently for the production of butter, cheese, and beef, all over the
